

The TikZpingus package

<https://github.com/EagleoutIce/tikzpingus>

Version v1.1 – 2023/09/17

Motivation

For my slides at university, I started to use the famous \LaTeX -package *tikzducks* a few years ago. Yet, it seemed somewhat of a necessity to extend the range of available “cute” animals in \LaTeX . Therefore I started writing this package: *tikzpingus*.⁽¹⁾

Please note: While *tikzpingus* is certainly inspired by *tikzducks*, it does offer a different set of features (e.g., multiple wing positions, ...).

I would be happy for any feedback or issues on the *tikzpingus*-GitHub.

⁽¹⁾ Why “pingu” and not “pengu”? Well, this is the third try on achieving cute penguins without using any templates or vector formats as a basis. As a German, the short form “pingu” was merely a typo that originated from the German word “pinguin” for “penguin”. It somewhat stuck...

1 Introduction

1.1 Dependencies

As this package is constantly work in progress, the concrete dependencies may change any time. At the moment, it loads **TikZ**, which loads a lot of other packages (e.g. **xcolor**), and **etoolbox**. Furthermore, the following TikZ-Libraries are in use:⁽²⁾ *intersections*, *shadings*, *patterns.meta*, *decorations.pathmorphing*, and *shapes.symbols*.

1.2 Copyright

Copyright © *Florian Sihler*. Permission is granted to copy, distribute and/or modify this software under the terms of the GNU General Public License, version 3.0 (to be found online at: <https://opensource.org/licenses/gpl-3.0.html>).

The shown example penguins are purely fictional characters, any resemblance to real penguins or real persons is purely coincidental and no copyright infringement is intended.

2 Usage

If you just want a penguin, import the package and start with the following:

One small penguin

```
\begin{tikzpicture}
  \pingu
\end{tikzpicture}
```

There are *a lot* of configuration-options which can be passed as an optional argument via the known `<key>=<value>`-style. See [Appendix A](#) for a complete gadget overview.

Happy penguin with cup!

```
\begin{tikzpicture}
  \pingu[left wing wave, right wing grab,
          eyes shiny, cup]
\end{tikzpicture}
```

Please note, that “left” and “right” have been chosen from the penguin-perspective.

`\pingu[penguin keys]`

The command to draw the penguin!

⁽²⁾ A lot of the libraries loaded are important only for specific extras. I plan on cleaning them up.

Besides the keys defined by this package, you can use the keys of TikZ and pgf as well (the duck was generated by the lovely [tikzducks](#) package):

The Reunion	
<pre>\begin{tikzpicture} \duck \pingu[xshift=2.7cm, yshift=14mm, eyes wink] \end{tikzpicture}</pre>	

2.1 Using the Coordinates

While there are a lot of gadgets available already, every penguin is accompanied by *several* adaptive coordinates to place custom items, texts, ... They can be visualized by the `/pingu/meta-dots` option. Furthermore, some extras create further coordinates themselves! All coordinates are available with `<pingu-name>-<coordinate>`. While the default name of a penguin is “pingu”, it can be changed with the name option:

Lotta dots	
<pre>\begin{tikzpicture} \pingu[meta dots, left wing wave, right wing grab, name=paula] \node at (paula-belly-center) {X}; \node at (paula-foot-left) {Foot}; \end{tikzpicture}</pre>	

Lets look at those coordinates in more detail (all labels are to be prefixed by `</pingu/>`):

The Wings This view excluded a lot of special data collected on the wings! While there is more information stored for each wing, the following five coordinates are the most important to place items into penguins hand:

The Body Similarly to the wing position, different body types can change the coordinates (left the `/pingu/body type chubby` and right the `/pingu/body type legacy`):

2.2 Colors

A lot of options allow for a color to be passed. In general, you can provide any color that *TikZ* is happy with! Yet, there are some predefined pingu-colors shipped with this package:

● pingu@main r: 3, g: 14, b: 29	● pingu@bronze r: 205, g: 127, b: 50	● pingu@lightblue r: 174, g: 229, b: 243	● pingu@red r: 217, g: 40, b: 28
● pingu@black r: 23, g: 19, b: 19	● pingu@white r: 248, g: 248, b: 248	● pingu@blue r: 48, g: 161, b: 247	● pingu@purple r: 244, g: 48, b: 93
● pingu@silver r: 192, g: 192, b: 192	● pingu@yellow r: 252, g: 187, b: 21	● pingu@green r: 129, g: 204, b: 41	

Furthermore, there is the special color “!hide” (`\@pingu@none`) which is available for most⁽³⁾ extras and wing-items. This color prohibits the compartments from being drawn. To be more precise, the package defines the macro `\@pingu@none`, which is matched against the selected color.

⁽³⁾ Why just “most”? Well, this package is work in progress and I have added the option late, so I may have forgotten to patch some keys.

As an example, let's take a look at the `/pingu/cup-extra`, which provides an additional key `/pingu/cup straw` to color the straw:

Cup without a straw	
<pre>\begin{tikzpicture} \pingu[wings grab, cup=pingu@purple, cup straw=pingu@blue] \pingu[wings grab, cup, xshift=2.7cm, cup straw=!hide] \end{tikzpicture}</pre>	

As you can see, using `!hide`, the straw will not be drawn.

2.3 Setting the defaults

You do not have to re-state every key. With `\pingudefaults` and `\pingudefaultsappend` (similar, but extends the current options) you can set default-options for all penguins to come:

Change the mainstream	
<pre>\begin{tikzpicture} \pingudefaults{wings grab, eyes shiny} \pingu \pingu[left wing shock, xshift=2.7cm] \end{tikzpicture}</pre>	

`\pingudefaults{penguin keys}`

Sets the given *penguin keys* as defaults for the local group. Overwrites any previous defaults (see `\pingudefaultsappend`).

`\pingudefaultsappend{penguin keys}`

Appends the given *penguin keys* as defaults for the local group. To overwrite these keys, see `\pingudefaults`.

2.4 Changing the wings

As already demonstrated, it is possible to change the wing positions! All selected wing-items will adapt to the wing-position (although not all wing-items will make sense with every wing-position). Currently, there are the following wing-positions: *"none"*, *"normal"*, *"wave"*, *"raise"*, *"grab"*, *"shock"*, and *"hug"*. "none" is a special wing-position: it omits the drawing of wings (teaser: every selection has a none-option, which prohibits the part from being drawn)!

For each valid wing-position you can use `wings <position>` to change both wings or `left wing <position>` and `right wing <position>` to change only one wing respectively. The default wing-position is “normal”. If you supply multiple options for a wing, only the last one survives.⁽⁴⁾ This is shown in Box “Wing-Showcase”.

Wing-Showcase

```
\begin{tikzpicture}
  \pingu[left wing none, heart=green]
  \pingu[wings wave, heart=teal, xshift=3.5cm]
  \pingu[wings hug, heart=orange, xshift=7cm]
  \pingu[left wing grab, right wing shock, heart=purple, xshift=10.5cm]
\end{tikzpicture}
```

2.5 Changing the eyes

Just like the wings, there are a couple of different eye-styles to choose from: “none”, “normal”, “vertical”, “shiny”, “wink”, “shock”, “devil”, “sad”, “angry”, “hearts”, and “critical”. Similar to the wings, there is a “none” and a “normal”-option (which is the default). Furthermore, the convenient selectors `eyes <style>`, `left eye <style>`, and `right eye <style>` exist as well. All of this is showcased in Box “Eye-Showcase”.

2.6 Changing other components

Just like for the wings and the eyes, you can change the following body parts:

- The *body type* itself
Select from: “none”, “normal”, “chubby”, “legacy”, “tilt-right”, and “tilt-left”.
- The *feet* (again with separate left and right)
Select from: “none”, “normal”, “sit”, “simple”, “back”, and “chubby”.
- The *bill* (does not have left and right, as there is just one)
Select from: “none”, “normal”, “foreground”, “flat”, and “angry”.

⁽⁴⁾ For the sake of completeness: `wings <position>`, `left wing <position>`, and `right wing <position>` are just alternatives i prefer: `wings=<position>`, `left wing=<position>` and `right wing=<position>`.

Eye-Showcase

```
\begin{tikzpicture}
  \pingu[left eye none, heart=green]
  \pingu[eyes wink, heart=teal, xshift=3.5cm]
  \pingu[eyes shock, heart=orange, xshift=7cm]
  \pingu[left eye devil, right eye angry, heart=purple, xshift=10.5cm]
\end{tikzpicture}
```

- The *hairstyle* (does not have left and right)
Select from: "none" and "normal".

For each selection, “none” will prohibit the drawing, and “normal” is the default chosen. See Box “Bodyparts-Showcase” for an example.

Bodyparts-Showcase

```
\begin{tikzpicture}
  \pingu[bill angry, heart=green]
  \pingu[feet back, hairstyle none, heart=teal, xshift=3.5cm]
  \pingu[bill flat, feet simple, heart=orange, xshift=7cm]
  \pingu[feet none, bill none, heart=purple, xshift=10.5cm]
\end{tikzpicture}
```

2.7 Predefined Styles

While the penguin options offer the modification of basically every drawing routine (through other styles like @block), it is tedious to change them every time. So I have started to create some predefined styles, that do change some of the penguins appearance (and are completely new, so beware of bugs). The following list presents an incomplete overview:

- `:line`, draw everything with a line.

- `:fill`, fill main penguin.

- `:ghost parts`, draw components with transparency.

- `:ghost`, draw all layers with transparency.

- `:devil`, set main “devil”-components.

- `:back`, flip the penguin (swaps left & right).

- `:hide`, do not draw main pingu.

- `:mix`, mix the main penguin with a given color.

- `:mix-draw`, mix the main penguin completely with a given color.

- `:mix-all`, mix everything with a given color.

Currently, only some of the styles do affect other items. As an example, consider `:line`, that changes the draw-style of wing-items and extras:

Line Penguin	
<pre>\begin{tikzpicture} \pingu[:line, princess crown, silver medal] \end{tikzpicture}</pre>	

2.8 Randomness

Each selection (like the wings or the eyes) can receive a special command `!random`. If given, the penguin will receive a randomly picked component. Please note, that `none` (the component removing it) will never be picked. The first line in the example in Box “Random Penguin” sets the seed.

In a more general fashion, there is a `/pingu/random from` key for completely random penguins.

Random Penguin

```
\pgfmathsetseed{\number\pdfrandomseed}
\begin{tikzpicture}
  \pingu[wings=!random,eyes=!random,
    left foot=!random,
    bill=!random,
    hairstyle=!random]
\end{tikzpicture}
```

`/pingu/random from = <list>`

You can pass any list of penguin keys and exactly one of them will be selected. You can nest `/pingu/random from`-calls. Please note, that the items are not separated by comma but in braces. The first line in the example sets the seed:

```
\pgfmathsetseed{\number\pdfrandomseed}
\begin{tikzpicture}
  \pingu[random from={{eye patch left}{
    eye patch right}{halo,halo raise=4mm}},
    random from={{right eye color=
    pingu@blue}{random from={{bow tie}{
    gold medal}}}},random from={{eyes=
    !random}{wings=!random}},body type=
    legacy]
\end{tikzpicture}
```

2.9 Extras

An extra is considered everything, that is attached to the main penguin and not to the wings (as those items may be placed separately for both wings). Most extras are activated with the format `<extra>=<color>` (the `<color>` option is not mandatory) and try to adapt with other extras that have been placed (yet you can place multiple hats if you really like to). A lot of the extras do offer more keys to customize their appearance. They are explained in the full reference ([Appendix B](#)).

Consider the somewhat overkill-example of “[Lord-Gadget, the penguin](#)”.

2.10 Wing-Items

Wing items are basically just like extras, but they can be selected separately for the left and right wing. Furthermore, they adapt their *default* appearance to the active wing positions ([subsection 2.4](#)). Currently there are the following wing items: *cane*, *staff*, *present*, *snowball*, *devilfork*, *flag*, *lollipop*,

Lord-Gadget, the penguin

```
\begin{tikzpicture}
  \pingu[crown 2d=pingu@bronze,
    medal=pingu@purple, tie,
    eye patch left=teal,
    eye patch right=orange,
    right wing wave, sunglasses,
    glow thick=yellow]
\end{tikzpicture}
```

broom, hammer, plank, magnifier, horse, handcast, lightsaber, lightstaff, signpost, vrcontroller, and laptop. They are selected using `<wing item> <left/right>`.

Additionally, they can be customized by `/pingu/left item angle` and `/pingu/right item angle`, as well as `/pingu/left item flip` and `/pingu/right item flip`. Lets consider an example...

Penguin with full wings!

```
\begin{tikzpicture}[scale=.75]
  \pingu[lightsaber right=orange,
    lollipop left,
    right item angle=70,
    right wing raise, left wing grab]
  \pingu[cane left, right item flip,
    sign post right={Hi!}, xshift=35mm]
\end{tikzpicture}
```

2.11 Clothing

Clothing is the newest extension to the collection, at and the moment there is not one “real” clothing, that really adapts to the penguins-position. I am working on the *cloak*-Clothing at the moment:

Pengu-Clothes

```
\begin{tikzpicture}[scale=.75]
  \pingu[cloak]
\end{tikzpicture}
```

B Full Reference

Please note, that all preview-penguins have been reduced in scale to 50 % to save space and make the documentation more concise.

Aliases may set custom defaults. Those defaults are not listed as they may change.

B.1 Penguin Keys

`/pingu/name = <text>` (pingu)

Sets the name of the penguin. This name is used for all the automatically generated coordinates (see [subsection 2.1](#)).

`/pingu/scale = <floating point>` (active scale)

Changes the scale for the penguin. This is not supported by all items by default (as some scales have to be re-calculated according to their rotation). Yet, it should work with most.

Furthermore, this value can be used to make the penguin independent of the outer scaling.

`/pingu/meta-dots = <true/false>` (false)

Can be used to enable and disable the meta dots ([subsection 2.1](#)). Passed true by default.

`/pingu/meta dots = <true/false>` (false)

This is an alias for `/pingu/meta-dots`.

B.1.1 The Feet

`/pingu/left foot = <foot-selector>` (normal)

Change the style of the left foot. All valid values are listed in [subsection 2.6](#).

```
\begin{tikzpicture}
  \pingu[left foot=simple]
\end{tikzpicture}
```

`/pingu/left foot color = <color>` (pingu@yellow)

```
\begin{tikzpicture}
  \pingu[left foot color=green]
\end{tikzpicture}
```

`/pingu/left foot none = <color>` (pingu@yellow)

This is a shortcut for: `/pingu/left foot = none`. The “color” argument is passed to `/pingu/left foot color`.

`/pingu/left foot normal = <color>` (pingu@yellow)

This is a shortcut for: `/pingu/left foot = normal`. The “color” argument is passed to `/pingu/left foot color`.

`/pingu/left foot sit = <color>` (pingu@yellow)

This is a shortcut for: `/pingu/left foot = sit`. The “color” argument is passed to `/pingu/left foot color`.

`/pingu/left foot simple = <color>` (pingu@yellow)

This is a shortcut for: `/pingu/left foot = simple`. The “color” argument is passed to `/pingu/left foot color`.

`/pingu/left foot back = <color>` (pingu@yellow)

This is a shortcut for: `/pingu/left foot = back`. The “color” argument is passed to `/pingu/left foot color`.

`/pingu/left foot chubby = <color>` (pingu@yellow)

This is a shortcut for: `/pingu/left foot = chubby`. The “color” argument is passed to `/pingu/left foot color`.

`/pingu/right foot = <foot-selector>` (normal)

Change the style of the right foot. All valid values are listed in [subsection 2.6](#).

```
\begin{tikzpicture}
  \pingu[right foot=simple]
\end{tikzpicture}
```

`/pingu/right foot color = <color>` (pingu@yellow)

```
\begin{tikzpicture}
  \pingu[right foot color=green]
\end{tikzpicture}
```

`/pingu/right foot none = <color>` (pingu@yellow)

This is a shortcut for: `/pingu/right foot = none`. The “*color*” argument is passed to `/pingu/right foot color`.

`/pingu/right foot normal = <color>` (pingu@yellow)

This is a shortcut for: `/pingu/right foot = normal`. The “*color*” argument is passed to `/pingu/right foot color`.

`/pingu/right foot sit = <color>` (pingu@yellow)

This is a shortcut for: `/pingu/right foot = sit`. The “*color*” argument is passed to `/pingu/right foot color`.

`/pingu/right foot simple = <color>` (pingu@yellow)

This is a shortcut for: `/pingu/right foot = simple`. The “*color*” argument is passed to `/pingu/right foot color`.

`/pingu/right foot back = <color>` (pingu@yellow)

This is a shortcut for: `/pingu/right foot = back`. The “*color*” argument is passed to `/pingu/right foot color`.

`/pingu/right foot chubby = <color>` (pingu@yellow)

This is a shortcut for: `/pingu/right foot = chubby`. The “*color*” argument is passed to `/pingu/right foot color`.

`/pingu/feet = <foot-selector>`

Change the style of both feet by calling `/pingu/left foot` and `/pingu/right foot` with the same value.

```
\begin{tikzpicture}
  \pingu[feet=simple]
\end{tikzpicture}
```

```
/pingu/feet color = <color>
```

Sets the color of both feet (using `/pingu/left foot color` and `/pingu/right foot color`).

```
\begin{tikzpicture}
  \pingu[feet color=green]
\end{tikzpicture}
```

```
/pingu/feet none = <color>
```

This is a shortcut for: `/pingu/feet = none`. The “color” argument is passed to `/pingu/feet color`.

```
/pingu/feet normal = <color>
```

This is a shortcut for: `/pingu/feet = normal`. The “color” argument is passed to `/pingu/feet color`.

```
/pingu/feet sit = <color>
```

This is a shortcut for: `/pingu/feet = sit`. The “color” argument is passed to `/pingu/feet color`.

```
/pingu/feet simple = <color>
```

This is a shortcut for: `/pingu/feet = simple`. The “color” argument is passed to `/pingu/feet color`.

```
/pingu/feet back = <color>
```

This is a shortcut for: `/pingu/feet = back`. The “color” argument is passed to `/pingu/feet color`.

```
/pingu/feet chubby = <color>
```

This is a shortcut for: `/pingu/feet = chubby`. The “color” argument is passed to `/pingu/feet color`.

```
/pingu/feet front = <true/false>
```

(false)

If set to true, the feet will be drawn in front of the body:

```
\begin{tikzpicture}
  \pingu[feet front]
\end{tikzpicture}
```

B.1.2 The Body

```
/pingu/body main = <color>
```

(pingu@main)

Set the main color of the penguin. This will affect `/pingu/hair` as well, as this chooses its default value from the main color.

```
\begin{tikzpicture}
  \pingu[body main=green]
\end{tikzpicture}
```

`/pingu/body head = <color>`

(pingu@main)

Set the color of the penguin head.

```
\begin{tikzpicture}
  \pingu[body head=green]
\end{tikzpicture}
```

`/pingu/body = <color>`

Sets the color of the main penguin and the head, by calling `/pingu/body main` and `/pingu/body head` with the same value.

```
\begin{tikzpicture}
  \pingu[body=green]
\end{tikzpicture}
```

`/pingu/body front = <color>`

(pingu@white)

Sets the frontal color of the penguin.

```
\begin{tikzpicture}
  \pingu[body front=green]
\end{tikzpicture}
```

`/pingu/body type = <body type>`

(normal)

Change the active body type. All valid values are listed in [subsection 2.6](#):

```
\begin{tikzpicture}
  \pingu[body type=legacy]
\end{tikzpicture}
```

B.1.3 The Size

`/pingu/height = <length>`

(36.27708pt)

Change the height of the penguin manually. You probably should not use this key directly and refer to `/pingu/small size`, `/pingu/normal size`, and `/pingu/large size`:

```
\begin{tikzpicture}
  \pingu[height=17mm]
\end{tikzpicture}
```

`/pingu/small size`

Will use `/pingu/height` to create a small pingu:

```
\begin{tikzpicture}  
  \pingu[small size]  
\end{tikzpicture}
```

B.2 Drawing Styles

`/pingu/:line`

Disable glows, shades and fills and enforce a line. This line will be darker than the original fill color:

```
\begin{tikzpicture}
  \pingu[:line]
\end{tikzpicture}
```

`/pingu/:fill`

Makes the whole penguin in one solid color (basically a shortcut for setting all main penguin colors to the same):

```
\begin{tikzpicture}
  \pingu[:fill,tie=white,eyes color=white]
\end{tikzpicture}
```

`/pingu/:ghost parts = <opacity>` (.5)

Set the opacity of each penguin component individually. At the moment, this excludes some glow calculations.

```
\begin{tikzpicture}
  \pingu[:ghost parts]
\end{tikzpicture}
```

`/pingu/:ghost = <opacity>` (.5)

Set the opacity of the complete penguin. At the moment, this excludes some glow calculations.

```
\begin{tikzpicture}
  \pingu[:ghost]
\end{tikzpicture}
```

`/pingu/:devil = <color>` (pingu@purple)

Enable all devil components (not the wing items) and set their main color:

```
\begin{tikzpicture}
  \pingu[:devil=green]
\end{tikzpicture}
```

`/pingu/:hide`

Do not draw the main pingu:

```
\begin{tikzpicture}
  \pingu[santa hat, :hide]
\end{tikzpicture}
```

`/pingu/:back`

Mirror the penguin, this swaps left and right, the rotation and more. Yet, at least at the time of writing, this does not swap the drawing order in each layer, but just the layers:

```
\begin{tikzpicture}
  \pingu[:back, left wing wave,
        cane left, left item angle=70]
\end{tikzpicture}
```

`/pingu/:pingu = <options>`

Apply the given options to all penguin-keys (for `/pingu/body`, `/pingu/wings color`, `/pingu/eyes color`, `/pingu/bill color`, `/pingu/hair color`, and `/pingu/feet color`) allowing to re-use the original color:

```
\begin{tikzpicture}
  \pingu[:pingu={/pingu/@block/.style={fill=
    green}}]
\end{tikzpicture}
```

`/pingu/:mix = <color-mix>`

(50!white)

Mix the main penguin with given colors, but leave all extras intact. This can be used (for example) to gray-out the penguin:

```
\begin{tikzpicture}
  \pingu[mask,tie=red,lollipop left,:mix=
    50!green]
\end{tikzpicture}
```

In contrast to `:mix-draw` this changes the active colors of the penguin.

`/pingu/:mix-draw = <color-mix>`

(50!white)

Mix the main penguin with given colors, but leave all extras intact. This can be used (for example) to gray-out the penguin:

```
\begin{tikzpicture}
  \pingu[mask,tie=red,:mix-draw=50!green]
\end{tikzpicture}
```

In contrast to `:mix` this changes the drawing options (using `/pingu/:pingu`).

`/pingu/:mix-all = <color-mix>`

(50!white)

Mix everything of the penguin with given colors, including all extras intact. This can be used (for example) to gray-out the penguin:

```
\begin{tikzpicture}
  \pingu[mask,tie=red,:mix-all=50!green]
\end{tikzpicture}
```

This command is only in effect if `/pingu/horse right` is active.

```
\begin{tikzpicture}
  \pingu[horse right,horse right hoofs=green]
\end{tikzpicture}
```

`/pingu/horse right xshift = <color>` (opt)

This command is only in effect if `/pingu/horse right` is active.

This key reacts with the `/pingu/horse right flip` option!

```
\begin{tikzpicture}
  \pingu[horse right,horse right xshift=1cm]
\end{tikzpicture}
```

`/pingu/horse right yshift = <color>` (opt)

This command is only in effect if `/pingu/horse right` is active.

  \pingu[horse right,horse right yshift=1cm]
\end{tikzpicture}
```

`/pingu/horse right on base`

This command is only in effect if `/pingu/horse right` is active.

Uses `/pingu/horse right xshift` and `/pingu/horse right yshift` to align a horse on a base to be set on the penguin-wing:

```
\begin{tikzpicture}
  \pingu[horse right,horse right has base,
        horse right on base]
\end{tikzpicture}
```

B.5 Clothes

Clothes are currently completely work in progress as the goal is to create an elegant way to offer clothes that adapt to the wing positions of the penguin. Currently there is only one cloth type that may be heavily edited in the course of development...

B.5.1 The cloak

Originally developed just as a cape, the cloak is now a whole extension.

`/pingu/cloak = <color>`

(pingu@bronze)

```
\begin{tikzpicture}
  \pingu[cloak=green]
\end{tikzpicture}
```

Cloak-Showcase

```
\begin{tikzpicture}
  \pingu[wings wave, cloak]
  \pingu[wings shock, cloak, xshift=3.5cm]
  \pingu[right wing wave, left wing hug, cloak, xshift=7cm]
  \pingu[right wing grab, left wing raise, cloak, xshift=10.5cm]
\end{tikzpicture}
```

`/pingu/cloak cap = <color>`

(<cloak-color>!98!pingu@black)

This command is only in effect if `/pingu/cloak` is active.

```
\begin{tikzpicture}
  \pingu[cloak, cloak cap=green]
\end{tikzpicture}
```

`/pingu/cloak wings color = <color>`

(<cloak-color>!90!white!94!pingu@black)

This command is only in effect if `/pingu/cloak` is active.

```
\begin{tikzpicture}
  \pingu[cloak, cloak wings color=green]
\end{tikzpicture}
```

`/pingu/cloak bottom color = <color>` (`<cloak-color>!go!black`)

This command is only in effect if `/pingu/cloak` is active.

Should change the cloaks bottom color (currently ineffective):

```
\begin{tikzpicture}
  \pingu[cloak, cloak bottom color=green]
\end{tikzpicture}
```

`/pingu/cloak front color = <color>` (`<cloak-color>!go!white`)

This command is only in effect if `/pingu/cloak` is active.

Should change the cloaks front color (currently ineffective):

```
\begin{tikzpicture}
  \pingu[cloak, cloak front color=green]
\end{tikzpicture}
```

`/pingu/cloak padding = <length>` (1.95mm)

This command is only in effect if `/pingu/cloak` is active.

```
\begin{tikzpicture}
  \pingu[cloak, cloak padding=13mm]
\end{tikzpicture}
```

`/pingu/cape = <color>` (`pingu@bronze`)

Uses `/pingu/cloak` but disables all parts that are not part of a cape:

```
\begin{tikzpicture}
  \pingu[cape=green]
\end{tikzpicture}
```

B.5.2 The shirt

`/pingu/shirt = <color>` (`pingu@bronze`)

```
\begin{tikzpicture}
  \pingu[shirt=green]
\end{tikzpicture}
```

`/pingu/shirt raise = <length>` (2.25mm)

This command is only in effect if `/pingu/shirt` is active.

```
\begin{tikzpicture}
  \pingu[shirt, shirt raise=5mm]
\end{tikzpicture}
```

`/pingu/shirt padding = <length>` (0mm)

This command is only in effect if `/pingu/shirt` is active.

```
\begin{tikzpicture}
  \pingu[shirt, shirt padding=4mm]
\end{tikzpicture}
```

`/pingu/shirt button top = <color>` (pingu@black)

This command is only in effect if `/pingu/shirt` is active.

```
\begin{tikzpicture}
  \pingu[shirt, shirt button top=green]
\end{tikzpicture}
```

`/pingu/shirt button middle = <color>` (pingu@black)

This command is only in effect if `/pingu/shirt` is active.

```
\begin{tikzpicture}
  \pingu[shirt, shirt button middle=green]
\end{tikzpicture}
```

`/pingu/shirt button bottom = <color>` (pingu@black)

This command is only in effect if `/pingu/shirt` is active.

```
\begin{tikzpicture}
  \pingu[shirt, shirt button bottom=green]
\end{tikzpicture}
```

```
/pingu/shirt buttons = <color>
```

This command is only in effect if /pingu/shirt is active.

Set /pingu/shirt button top, /pingu/shirt button middle and /pingu/shirt button bottom, that is all the buttons, with the same color:

```
\begin{tikzpicture}  
  \pingu[shirt, shirt buttons=green]  
\end{tikzpicture}
```

```
/pingu/shirt button top shade = <color>
```

```
(pingu@black!70!<shirt-color>!70!white)
```

This command is only in effect if /pingu/shirt is active.

```
\begin{tikzpicture}  
  \pingu[shirt, shirt button top shade=green]  
\end{tikzpicture}
```

```
/pingu/shirt button middle shade = <color>
```

```
(pingu@black!70!<shirt-color>!70!white)
```

This command is only in effect if /pingu/shirt is active.

```
\begin{tikzpicture}  
  \pingu[shirt, shirt button middle shade=green]  
\end{tikzpicture}
```

```
/pingu/shirt button bottom shade = <color>
```

```
(pingu@black!70!<shirt-color>!70!white)
```

This command is only in effect if /pingu/shirt is active.

```
\begin{tikzpicture}  
  \pingu[shirt, shirt button bottom shade=green]  
\end{tikzpicture}
```

```
/pingu/shirt buttons shade = <color>
```

This command is only in effect if /pingu/shirt is active.

Set all shadings of the buttons: /pingu/shirt button top shade, /pingu/shirt button middle shade and /pingu/shirt button bottom shade with the same color:

```
\begin{tikzpicture}  
  \pingu[shirt, shirt buttons shade=green]  
\end{tikzpicture}
```

`/pingu/shirt no buttons`

This command is only in effect if `/pingu/shirt` is active.

Disable all buttons (by setting their colors to `!hide`):

```
\begin{tikzpicture}
  \pingu[shirt, shirt no buttons]
\end{tikzpicture}
```

`/pingu/shirt above`

This command is only in effect if `/pingu/shirt` is active.

This is interesting in combination with other extras as it allows the `/pingu/shirt` to be drawn above them.

```
\begin{tikzpicture}
  \pingu[shirt, tie, shirt above]
  \pingu[shirt, tie, xshift=3cm]
\end{tikzpicture}
```

B.5.3 The second shirt

`/pingu/second shirt = <color>`

(`pingu@red`)

Display a shirt below the `/pingu/shirt`:

```
\begin{tikzpicture}
  \pingu[second shirt=green, shirt]
\end{tikzpicture}
```

`/pingu/second shirt raise = <length>`

(`3.35mm`)

This command is only in effect if `/pingu/second shirt` is active.

```
\begin{tikzpicture}
  \pingu[second shirt, second shirt raise=5mm]
\end{tikzpicture}
```

`/pingu/second shirt neck = <color>`

(`<second-shirt-color>!32!pingu@white`)

This command is only in effect if `/pingu/second shirt` is active.

```
\begin{tikzpicture}
  \pingu[second shirt, second shirt neck=green]
\end{tikzpicture}
```

C Larger Examples

C.1 A chessboard

Let's assume, that we want to have a board of penguins playing chess. For starters, we need the individual pieces.

The pawns

```
\tikz{\pingu[body=pingu@black]}
\tikz{\pingu[:back,xshift=3cm]}
```

The rooks

```
\tikz{\pingu[body=pingu@black,rook]}
\tikz{\pingu[:back,rook,rook hatch=false]}
```

For the knights we make use of the `/pingu/horse behind` extra, which itself is based on the `/pingu/horse left`/`/pingu/horse right` wing item:

The knights

```
\tikz{\pingu[body=pingu@black,horse behind]}
\tikz{\pingu[:back,horse behind=pingu@black,
on horse flip]}
```

The queens

```
\tikz{\pingu[body=pingu@black,princess crown=
pingu@bronze]}
\tikz{\pingu[:back,princess crown=pingu@bronze]}
```

The kings

```
\tikz{\pingu[body=pingu@black,crown]}
\tikz{\pingu[:back,crown]}
```

The bishops

```
\tikz{\pingu[body=pingu@black,cross left=
pingu@black,mitra]}
\tikz{\pingu[:back,cross left,mitra]}
```

D The Internals

The goal of this section is to explain the inner workings of the package to aid other people in helping me extending and mainting the penguins.

D.1 General Commands

`\pingu@name`

Do **not** redefine this command, it is controlled by `/pingu/name`.

Holds the name of the penguin.

`\pingu@one`

Do not change this dimension as it represents one milli meter as the base unit.

D.1.1 Color Management

There is not a lot of magic in the color handling of this package.

`\pingu@color{name}{color}`

Creates a macro `\pingu@color@<name>` that links to the given color:

```
149 \def\pingu@color#1#2{%
150     \expandafter\def\csname pingu@color@#1\endcsname{#2}%
151 }
```

I decided against the usage of `\colorlet`, to support `\@pingu@none` and dynamic redefinition of the colors.

`\@pingu@none`

Holds the special color to hide the drawing of specific components as described within [subsection 2.2](#) (holds the value: “!hide”). If you redefine this command, you redefine this hidden color. However, if done outside of the preamble, this may result in weird side effects due to expansions.

As shown in [subsection 2.2](#), this is the definition of the colors, with the helper-macro `\@pingu@color@`, which i created solely for me editor to highlight the colors accordingly:

```
26 \def\@pingu@color@ #1#2(#3,#4,#5){\definecolor{pingu@#1}{#2}{#3,#4,#5}}
27 \@pingu@color@{main}RGB(3,14,29)
28 \@pingu@color@{black}RGB(23,19,19)
29 \@pingu@color@{silver}RGB(192,192,192)
30 \@pingu@color@{bronze}RGB(205,127,50)
31 \@pingu@color@{white}RGB(248,248,248)
32 \@pingu@color@{yellow}RGB(252,187,21)
33 \@pingu@color@{lightblue}RGB(174,229,243)
34 \@pingu@color@{blue}RGB(48,161,247)
35 \@pingu@color@{green}RGB(129,204,41)
36 \@pingu@color@{red}RGB(217, 40, 28)
37 \@pingu@color@{purple}RGB(244,48,93)
38 \def\@pingu@none{!hide}
```

D.1.2 Selections

TODO: explain selections

```
\pingu@create@selection{name}{none default}
```

Creates a new enumeration-like structure that can be used to register a family of options (see [subsection D.2](#) for an example). The *none default* is used for the default member of the selection: *none* which is active, whenever no other key is selected by `\pingu@<selection>@select`. You can add keys by using `\pingu@<selection>@add` and execute the selection by `\@pingu@drawer@<selection>@`.

```
\pingu@<selection>@select{select}
```

This command is only usable in combination with `\pingu@create@selection`.

```
\pingu@<selection>@add{select}
```

This command is only usable in combination with `\pingu@create@selection`.

```
\@pingu@drawer@<selection>@
```

This command is only usable in combination with `\pingu@create@selection`.

D.2 The Eyes

D.2.1 Important Commands

```
\pingu@eye@shift
```

This dimension holds a hardcoded value to be used as the offset for eyes. Its default value is 2.27621pt. It may be removed in the future (or replaced by an option).

D.2.2 The Code

The eyes of the penguin are controlled by two selections for the left, and the right eye. Because we always want the coordinates for the right and the left eye (as presented in [section 2.1](#)), the *none*-version of `\pingu@create@selection` creates those:

```
110 \pingu@create@selection{lefteye}{%
111     \path ([yshift=.75mm,xshift=\pingu@eye@shift]\pingu@name-eye-back-left)
112         coordinate (\pingu@name-eye-left);%
113 }
114 \pingu@create@selection{righteye}{%
115     \path ([yshift=.75mm,xshift=-\pingu@eye@shift]\pingu@name-eye-back-right)
116         coordinate (\pingu@name-eye-right);%
117 }
```

With this code, we define the six following commands: `\pingu@lefteye@select`, `\pingu@lefteye@add`, `\@pingu@drawer@lefteye@`, `\pingu@righteye@select`, `\pingu@righteye@add`, and `\@pingu@drawer@righteye@`.

Within the initialization of all penguin options, we use these commands. Furthermore, `/pingu/eyes` acts as a comfort option which operates on both selectors:

```

219 left eye/.code = \pingu@lefteye@select{#1},
220 left eye color/.code = \pingu@color{eye@left}{#1},
221 left eye second color/.code = \pingu@color{eye@second@left}{#1},
222 right eye/.code = \pingu@righteye@select{#1},
223 right eye color/.code = \pingu@color{eye@right}{#1},
224 right eye second color/.code = \pingu@color{eye@second@right}{#1},
225 eyes/.style = {
226     /pingu/left eye = {#1},
227     /pingu/right eye = {#1}
228 },
229 eyes color/.style = {
230     /pingu/left eye color = {#1},
231     /pingu/right eye color = {#1}
232 },
233 eyes second color/.style = {
234     /pingu/left eye second color = {#1},
235     /pingu/right eye second color = {#1}
236 },

```

Both eyes have two colors to work with: `\pingu@color@eye@left`, `\pingu@color@eye@second@left` for the left as well as `\pingu@color@eye@right` and `\pingu@color@eye@second@right` for the right eye.

D.2.3 Adding new Eyes

Now on how to add new eyes. While it is possible to use `\pingu@lefteye@add` and `\pingu@righteye@add`, setting up the corresponding “eye” and “eyes” comfont-methods is rather tedious. For this, i created the command `\pingu@eyes@s...`

```
\pingu@eyes@s{name}{left-eye}{right-eye} [default color=pingu@black]
```

Allows to easily add new eyes.

Important: Your code for the eyes *must* create the coordinates `\pingu@name-eye-left` and `\pingu@name-eye-right` respectively. This is not checked! It is recommended to use the coordinates `\pingu@name-eye-back-left` and `\pingu@name-eye-back-right` for reference.

The macro `\pingu@eyes@s` is defined with the help of `\pingu@eyes@s@` like this:

```

643 \long\def\pingu@eyes@s#1#2#3{%
644     \@ifnextchar[%
645         {\pingu@eyes@s@{#1}{#2}{#3}}%
646         {\pingu@eyes@s@{#1}{#2}{#3}[pingu@black]}}%
647 }
648 \long\def\pingu@eyes@s@#1#2#3[#4]{%
649     \pgfqkeys{/pingu}{%
650         left eye #1/.style = {/pingu/left eye={#1}, /pingu/left eye color={##1}},
651         left eye #1/.default = {#4},
652         right eye #1/.style = {/pingu/right eye={#1}, /pingu/right eye color={##1}},

```

```

653     right eye #1/.default = {#4},
654     eyes #1/.style        = {/pingu/eyes={#1}, /pingu/eyes color={##1}},
655     eyes #1/.default      = {#4}
656 }%
657 \pingu@lefteye@add{#1}{#2}\pingu@righteye@add{#1}{#3}%
658 }

```

As an example, this is the definition of the “normal eyes” (`/pingu/eyes normal`) in the code:

```

667 \pingu@eyes@s{normal}{%
668   \pingu@block{\pingu@color@eye@left}
669     ([yshift=.75mm,xshift=\pingu@eye@shift]\pingu@name-eye-back-left)
670     coordinate (\pingu@name-eye-left)
671     ellipse [x radius=.1225cm, y radius=.1365cm];
672 }{%
673   \pingu@block{\pingu@color@eye@right}
674     ([yshift=.75mm,xshift=-\pingu@eye@shift]\pingu@name-eye-back-right)
675     coordinate (\pingu@name-eye-right)
676     ellipse [x radius=.1225cm, y radius=.1365cm];
677 }

```

As another example, this is the definition of the “shiny eyes” (`/pingu/eyes shiny`):

```

687 \pingu@eyes@s{shiny}{%
688   \pingu@block{\pingu@color@eye@left}
689     ([yshift=.75mm,xshift=\pingu@eye@shift]\pingu@name-eye-back-left)
690     coordinate (\pingu@name-eye-left)
691     ellipse [x radius=.22cm, y radius=.26cm];
692   \pingu@block{\pingu@color@eye@second@left}
693     (\pingu@name-eye-left)++(\eyebaseang:.85mm and \pingu@one)
694     ellipse [x radius=.8mm, y radius=\pingu@one];
695   \pingu@block{\pingu@color@eye@second@left}
696     (\pingu@name-eye-left)++(\eyebaseang+180:.12cm and .14cm)
697     ellipse [x radius=.25mm, y radius=.35mm];
698 }{%
699   \pingu@block{\pingu@color@eye@right}
700     ([yshift=.75mm,xshift=-\pingu@eye@shift]\pingu@name-eye-back-right)
701     coordinate (\pingu@name-eye-right)
702     ellipse [x radius=.22cm, y radius=.26cm];
703   \pingu@block{\pingu@color@eye@second@right}
704     (\pingu@name-eye-right)++(\eyebaseang:.85mm and \pingu@one)
705     ellipse [x radius=.8mm, y radius=\pingu@one];
706   \pingu@block{\pingu@color@eye@second@right}
707     (\pingu@name-eye-right)++(\eyebaseang+180:.12cm and .14cm)
708     ellipse [x radius=.25mm, y radius=.35mm];
709 }

```

The usage of `\eyebaseang` is outdated and will probably be removed in the future.

D.3 The Bill

D.3.1 The Code

The bill of the penguin is controlled by one selection. As we always want the coordinates for theoretical bill position (as presented in [section 2.1](#)), the *none*-version of `\pingu@create@selection` creates it:

```
134 \pingu@create@selection{bill}{%
135     \coordinate (\pingu@name-bill-bottom) at (\pingu@name-bill);%
136 }
```

This code, defines three commands: `\pingu@bill@select`, `\pingu@bill@add`, `\pingu@drawer@bill@`.

Within the initialization of all penguin options, we use these commands:

```
255 bill/.code = \pingu@bill@select{#1},
256 bill color/.code = \pingu@color{bill}{#1},
```

With this, the bill has one color to work with: `\pingu@color@bill`.

D.3.2 Adding new Bills

Now on how to add new bills. While it is possible to use `\pingu@bill@add`, setting up the “bill” comfort-methods is rather tedious. For this, i created the command `\pingu@bill@s...`

```
\pingu@bill@s{name}{bill}
```

Allows to easily add new bills.

Important: Your code for the bill *must* create the coordinate `\pingu@name-bill-bottom`. This is not checked! It is recommended to use the coordinate `\pingu@name-bill` for reference.

The macro `\pingu@bill@s` is defined like this:

```
1008 \long\def\pingu@bill@s#1#2{%
1009     \pgfqkeys{/pingu}{%
1010         bill #1/.style = {/pingu/bill={#1}, /pingu/bill color={##1}},%
1011         bill #1/.default = pingu@yellow% TODO: defaults
1012     }%
1013     \pingu@bill@add{#1}{#2}%
1014 }
1015 \pgfqkeys{/pingu}{bill none/.style={/pingu/bill=none}}
```

As an example, this is the definition of the “normal bill” (`/pingu/bill normal`) in the code:

```

1019 \pingu@bill@s{normal}{%
1020   \pingu@block[rounded corners=.1mm]{\pingu@color@bill}
1021     (\pingu@name-bill)++(-.19cm,0) arc (180:360:.19cm and .225cm)
1022     coordinate[pos=.5] (\pingu@name-bill-bottom) -- ++(-.2mm,.05mm)
1023     to[bend right=10] ([xshift=-.17cm,yshift=.05mm]\pingu@name-bill)
1024   -- cycle;
1025 }

```

As another example, this is the definition of the “flat bill” (`/pingu/bill flat`):

```

1038 \pingu@bill@s{flat}{%
1039   \pingu@block{\pingu@color@bill} (\pingu@name-bill)++(-.19cm,0)
1040     arc (180:360:.19cm and .225cm)
1041     coordinate[pos=.5] (\pingu@name-bill-bottom)
1042   -- cycle;
1043 }

```

D.4 The Body Type

D.4.1 Important Commands

`\pingu@w@half`

This dimension holds a hardcoded value defining the half width of the penguin. Its default value is 26.67445pt.

`\pingu@side@h@half`

This dimension holds a hardcoded value defining the half height of the lower part of the penguin. Its default value is 36.27708pt. See `\pingu@head@h@half` for the additional head-height.

`\pingu@head@h@half`

This dimension holds a hardcoded value defining the half height of the upper (head) part of the penguin. Its default value is 24.00684pt.

`\pingu@bend`

This dimension holds a hardcoded value used as a basis for bend lines. Its default value is 3.55658pt. It may be removed in the future (or replaced by an option).

`\pingu@lower@off`

This dimension holds a hardcoded value used to offset the white inner parts of the penguin (for the bottom part). Its default value is 7.11317pt. It may be removed in the future (or replaced by an option).

`\pingu@outer@off`

This dimension holds a hardcoded value used to offset the lower part of the basic penguin. Its default value is 7.11317pt. It may be removed in the future (or replaced by an option).

`\pingu@foot@outer@w`

This dimension holds a hardcoded value defining the width of the outer feet. Its default value is 12.80373pt. It may be removed in the future (or replaced by an option).

`\pingu@foot@outer@h`

This dimension holds a hardcoded value defining the height of the outer feet. Its default value is 7.11317pt. It may be removed in the future (or replaced by an option).

`\pingu@foot@inner@w`

This dimension holds a hardcoded value defining the width of the inner feet. Its default value is 15.6491pt. It may be removed in the future (or replaced by an option).

`\pingu@foot@inner@h`

This dimension holds a hardcoded value defining the height of the inner feet. Its default value is 3.27222pt. It may be removed in the future (or replaced by an option).

`\pingu@headcon@x`

This dimension holds a hardcoded value defining the x-position offsetting the connection point of the penguin head. Its default value is 11.20335pt. It may be removed in the future (or replaced by an option).

`\pingu@headcon@y`

This dimension holds a hardcoded value defining the y-position offsetting the connection point of the penguin head. Its default value is 13.29729pt. It may be removed in the future (or replaced by an option).

D.4.2 The Code

The body of the penguin is controlled by one selection. There are a lot of coordinates to be created by this command (as presented in [section 2.1](#)). Furthermore, it must save some paths (`\pingu@lowerpingu`, `\pingu@upperpingu` and `\pingu@whitepingu`). Therefore, it is recommended, that you create a new one by first copying an existing definition. Due to its length, the *none*-version of `\pingu@create@selection` uses `\pingu@x@bodytype@none` as a helper:

```
143 \pingu@create@selection{bodytype}{\pingu@x@bodytype@none}
```

This code, defines three commands: `\pingu@bodytype@select`, `\pingu@bodytype@add`, `\@pingu@drawer@bodytype@`.

The macro `\pingu@x@bodytype@none` is defined as follows:

```
502 \def\pingu@x@bodytype@none{%
503   % set the lower half
504   \path[save path=\pingu@lowerpingu] (0,\pingu@outer@off)
505   % left side
```

```

506 to[bend right=\pingu@bend]
507     coordinate[pos=.775] (\pingu@name-waist-right)
508 ++(0,-\pingu@side@h@half-\pingu@outer@off)
509 % feety stuff
510 arc (180:270:\pingu@foot@outer@w{} and \pingu@foot@outer@h)
511     coordinate (\pingu@name-foot-right)
512 arc (270:332:\pingu@foot@inner@w{} and \pingu@foot@inner@h)
513     coordinate (\pingu@name-bottom-center)
514 arc (208:270:\pingu@foot@inner@w{} and \pingu@foot@inner@h)
515     coordinate (\pingu@name-foot-left)
516 arc (270:360:\pingu@foot@outer@w{} and \pingu@foot@outer@h)
517 % right side
518 to[bend right=\pingu@bend]
519     coordinate[pos=.225] (\pingu@name-waist-left)
520 ++(0,\pingu@side@h@half+\pingu@outer@off)
521 % switch to left
522     coordinate (\pingu@name-wings-side-left)
523 -- (0,\pingu@outer@off)
524     coordinate[pos=.5] (\pingu@name-head-center)
525     coordinate (\pingu@name-wings-side-right)
526 -- cycle;
527 % set the upper half
528 \path[save path=\pingu@upperpingu] (\pingu@name-head-center)
529 ++(0,\pingu@head@h@half)
530     coordinate (\pingu@name-head-top)
531 arc(90:450:\pingu@w@half{} and \pingu@head@h@half)
532     coordinate[pos=\pingu@anglehr] (\pingu@name-head-right)
533     coordinate[pos=\pingu@anglehl] (\pingu@name-head-left);
534
535 \coordinate (\pingu@name-belly-back) at (\pingu@w@half,-1cm);
536 \coordinate (\pingu@name-belly-center) at (\pingu@w@half,-.68\pingu@side@h@half);
537
538 % set the white above
539 \path[save path=\pingu@whitepingu] (\pingu@name-belly-back)
540 ++(-\pingu@w@half+\pingu@one,\pingu@lower@off)
541 to[bend right=.8\pingu@bend]
542 ++(0,1.05cm-\pingu@side@h@half-\pingu@lower@off)
543 arc (180:270:4mm and 2mm)
544 arc (270:331:5mm and .85mm)
545 arc (207:270:5mm and .85mm)
546 arc (270:360:4mm and 2mm)
547 to[bend right=.8\pingu@bend]
548 ++(0,\pingu@side@h@half-1.05cm+\pingu@lower@off)
549 arc (0:180:\pingu@w@half-.96mm and \pingu@w@half-\pingu@one)

```

```

550     -- cycle;
551
552     \coordinate (\pingu@name-eye-back-right)
553         at ([xshift=-.275cm,yshift=.25cm-\pingu@outer@off]\pingu@name-head-center);
554     \coordinate (\pingu@name-eye-back-left)
555         at ([xshift=.275cm,yshift=.25cm-\pingu@outer@off]\pingu@name-head-center);
556
557     \coordinate (\pingu@name-head-back-con-right)
558         at ([xshift=-\pingu@headcon@x,yshift=-\pingu@headcon@y]\pingu@name-eye-back-
559             right);
560     \coordinate (\pingu@name-head-back-con-left)
561         at ([xshift=\pingu@headcon@x,yshift=-\pingu@headcon@y]\pingu@name-eye-back-left)
562         ;
563 }

```

Important: Please note, that when writing the initial penguin, I did not intend to allow additional body shapes. Therefore, most of the defaults and “globals” must be defined here (alongside a lot of hardcoding).

Within the initialization of all penguin options, we define the main colors:

```

208  body type/.code          = \pingu@bodytype@select{#1},
209  body main/.code          = \pingu@color{body@main}{#1},
210  body head/.code          = \pingu@color{body@head}{#1},
211  body/.style              = {/pingu/body main={#1}, /pingu/body head={#1}},
212  body front/.code         = \pingu@color{body@front}{#1},

```

With this, the body has three colors to work with: `\pingu@color@body@main`, `\pingu@color@body@head`, and `\pingu@color@body@front`.

D.5 The Feet

D.5.1 Important Commands

`\basicfeetbend`

This macro holds a hardcoded value to be used as the angle of rotation of the feet. Its default value is 45. The left foot uses the negative value. It may be removed in the future (or replaced by an option).

The only reason for the command being user accessible is, that it was the primary way to modify the penguin in a previous version of the package.

`\pingu@foot@single@w`

This dimension holds a hardcoded value to be used as the base foot width. Its default value is 2.98741pt. It may be removed in the future (or replaced by an option).

```
\pingu@foot@single@h
```

This dimension holds a hardcoded value to be used as the base foot height. Its default value is 5.69054pt. It may be removed in the future (or replaced by an option).

D.5.2 The Code

Similarly to the eyes, the feet of the penguin are controlled by two selections for the left, and the right foot. There are no extra coordinates necessary, therefore `\pingu@create@selection` receives no argument for the *none*-version:

```
139 \pingu@create@selection{leftfoot}{}
140 \pingu@create@selection{rightfoot}{}

```

This defines the six commands: `\pingu@leftfoot@select`, `\pingu@leftfoot@add`, `\@pingu@drawer@leftfoot@`, `\pingu@rightfoot@select`, `\pingu@rightfoot@add`, and `\@pingu@drawer@rightfoot@`.

Within the initialization of all penguin options, we use these commands. Furthermore, `/pingu/feet` acts as a comfort option which operates on both selectors:

```
193 left foot color/.code      = \pingu@color{foot@left}{#1},
194 left foot/.code            = \pingu@leftfoot@select{#1},
195 right foot color/.code     = \pingu@color{foot@right}{#1},
196 right foot/.code          = \pingu@rightfoot@select{#1},
197 feet/.style               = {
198     /pingu/left foot={#1},
199     /pingu/right foot={#1}
200 },
201 feet color/.style         = {
202     /pingu/left foot color={#1},
203     /pingu/right foot color={#1}
204 },
205 feet front/.is if         = @pingu@feet@front,

```

The conditional `\if@pingu@feet@front` is defined above and defaults to *false*:

```
162 \newif\if@pingu@feet@front

```

Each foot has one color to work with: `\pingu@color@foot@left` for the left and `\pingu@color@foot@right` for the right foot.

D.5.3 Adding new Feet

Now on how to add new feet. While it is possible to use `\pingu@leftfoot@add` and `\pingu@rightfoot@add`, setting up the corresponding “foot” and “feet” comfort-methods is rather tedious. For this, i created the command `\pingu@feet@s...`

```
\pingu@feet@s{name}{left-foot}{right-foot} [default color=pingu@yellow]
```

Allows easily adding new feet.

The macro `\pingu@feet@s` is defined with the help of `\pingu@feet@s@` like this:

```

881 \long\def\pingu@feet@s#1#2#3{%
882   \ifnextchar[%
883     {\pingu@feet@s@{#1}{#2}{#3}}%
884     {\pingu@feet@s@{#1}{#2}{#3}[pingu@yellow]}%
885   }
886 \long\def\pingu@feet@s@#1#2#3[#4]{%
887   \pgfqkeys{/pingu}{%
888     left foot #1/.style = {/pingu/left foot={#1}, /pingu/left foot color={##1}},%
889     left foot #1/.default = {#4},%
890     right foot #1/.style = {/pingu/right foot={#1}, /pingu/right foot color={##1}},
      %
891     right foot #1/.default = {#4},%
892     feet #1/.style = {/pingu/feet={#1}, /pingu/feet color={##1}},%
893     feet #1/.default = {#4}%
894   }%
895   \pingu@leftfoot@add{#1}{#2}\pingu@rightfoot@add{#1}{#3}%
896 }

```

As an example, this is the definition of the “normal feet” (`/pingu/feet normal`) in the code:

```

905 \pingu@feet@s{normal}{%
906   \coordinate (@tmp) at ([xshift=-.5\pingu@foot@single@h]\pingu@name-foot-left);
907   \pingu@block[rotate around={-25+\basicfeetbend:(@tmp)}]{\pingu@color@foot@left}
908     (@tmp) ellipse [
909       x radius=\pingu@foot@single@w,
910       y radius=\pingu@foot@single@h
911     ];
912   \pingu@block[rotate around={\basicfeetbend:(\pingu@name-foot-left)}]
913     {\pingu@color@foot@left} (\pingu@name-foot-left) ellipse [
914       x radius=\pingu@foot@single@w,
915       y radius=\pingu@foot@single@h
916     ];
917
918   \coordinate (@tmp) at ([xshift=.5\pingu@foot@single@h]\pingu@name-foot-left);
919   \pingu@block[rotate around={25+\basicfeetbend:(@tmp)}]{\pingu@color@foot@left}
920     (@tmp) ellipse [
921       x radius=\pingu@foot@single@w,
922       y radius=\pingu@foot@single@h
923     ];
924 }%
925 \coordinate (@tmp) at ([xshift=-.5\pingu@foot@single@h]\pingu@name-foot-right);
926 \pingu@block[rotate around={-25-\basicfeetbend:(@tmp)}]{\pingu@color@foot@right}
927   (@tmp) ellipse [

```

```

928         x radius=\pingu@foot@single@w,
929         y radius=\pingu@foot@single@h
930     ];
931     \pingu@block[rotate around={-\basicfeetbend:(\pingu@name-foot-right)}]
932     {\pingu@color@foot@right} (\pingu@name-foot-right) ellipse [
933         x radius=\pingu@foot@single@w,
934         y radius=\pingu@foot@single@h
935     ];
936     \coordinate (@tmp) at ([xshift= .5\pingu@foot@single@h]\pingu@name-foot-right);
937     \pingu@block[rotate around={25-\basicfeetbend:(@tmp)}]{\pingu@color@foot@right}
938     (@tmp) ellipse [
939         x radius=\pingu@foot@single@w,
940         y radius=\pingu@foot@single@h
941     ];
942 }

```

As another example, this is the definition of the “simple feet” (`/pingu/feet simple`):

```

961 \pingu@feet@s{simple}{%
962     \pingu@block[rotate around={-\basicfeetbend:(\pingu@name-foot-left)}]
963     {\pingu@color@foot@left} (\pingu@name-foot-left) ellipse [
964         x radius=2.66\pingu@foot@single@w,
965         y radius=\pingu@foot@single@h
966     ];
967 }{%
968     \pingu@block[rotate around={\basicfeetbend:(\pingu@name-foot-right)}]
969     {\pingu@color@foot@right} (\pingu@name-foot-right) ellipse [
970         x radius=2.66\pingu@foot@single@w,
971         y radius=\pingu@foot@single@h
972     ];
973 }

```
